

On April 8<sup>th</sup> 2024 the Moon will cross in front of the Sun blocking the Earth's view of it. Because of the time of day, and the position of the Earth, this event will pass over the state from Dayton to Cleveland with a 115 mile wide shadow. In this path the sun will be blocked from 2 – 4 minutes. Outside the path the sun will still put on an impressive partial eclipse. With the last time this happened being 1806 and the next time being 2099, citizens all over Ohio have been gearing up to celebrate this once in a lifetime event, with festivals, viewing parties, and educational events.
